A view of human nature generally forms part of the assumptions that undergird psychological theories and psychotherapeutic approaches. In this book, Christian anthropology is articulated as a foundation for the theories, approaches and techniques applied in practice by its contributors. Various essays from European-based practitioners in the fields of psychology, psychotherapy and counselling are included here. These authors draw scientific knowledge from the fields of psychology and psychotherapy, focusing on intra-psychic aspects of human functioning, such as emotions, drives and cognitions, as well as interpersonal and eco-systemic functioning. In addition to this, the authors consider spirituality as an intrinsic part of humanity through which persons seek meaning and transcendence and that influences physical and mental health. Spiritual insight is gained from the field of theology with specific reference to the Christian faith tradition. As a wide range of topics, contexts and cultural and ecumenical backgrounds are covered in this book many practitioners in mental health care and counselling should benefit from the knowledge, ideas and practical experience shared here.

This book is about the author's personal experiences of the insanity of everyday living and her experiences as a black person and a woman. She has written it in a way that is meant to be engaging. Barbara opens up and invites her reader to experience her life through prose, narration and poetry. In inviting you, the reader, into conversation with her, she hopes to create and encourage dialogue on many fronts.

Can science, psychology, and biology explain miracles? This three-volume set attempts to answer that question, presenting the latest, as well as classic, thinking and research regarding miracles from fields that include psychology, psychiatry, theology, biology, and history. We have all heard of what seem miraculous events, which have surfaced across history. They range from stigmata and bleeding icons to deadly tumors that disappear and healers who succeed just by laying hands on the afflicted; from people who can predict unexpected events to so-called mediums and those who can allegedly see and speak with the dead. These books, led by an eminent scholar who serves as series editor for the Praeger series Psychology, Religion, and Spirituality, examine miracles of body, mind, and spirit, presenting the most recent research and writing on these uncommon events, aiming to bring hard science to some of the most persistent and peculiar phenomena associated with the human race. Can science, psychology, and biology explain miracles? This three-volume set attempts to answer that question, presenting the latest, as well as classic, thinking and research regarding miracles from fields that include psychology, psychiatry, theology, biology, and history. From news of a crippled woman who left her wheelchair and walked after an evangelist prayed over her, to stories of people who died on the operating table only to be revived to tell of bright lights and the pathway to the afterlife, we've all heard of what seem miraculous events. They have surfaced across history. They range from stigmata and bleeding icons to deadly tumors that disappear, and healers who succeed just by laying hands on the afflicted; from people who can predict unexpected events to so-called mediums and those who can allegedly see and speak with the dead. Some miracles are intricately tied to religious beliefs, but there are millions of people who ascribe to no particular religion, yet still believe that things happen that defy all laws of nature, and thus defy scientific explanation. In these books, eminent scholar J. Harold Ellens and his team of expert contributors examine miracles of body, mind, and spirit, presenting the most recent research and writing on these uncommon events as they aim to bring hard science to some of the most persistent—and peculiar—phenomena associated with the human race.

Can science, psychology, and biology explain miracles? This work explores this subject. It examines "miracles" of body, mind, and spirit, presenting the research and writing on these uncommon events.

Includes Publications received in terms of Copyright act no. 9 of 1916.

The study of personality has a long history and many different theoretical viewpoints within psychology. Psychology Library Editions: Personality (16 Volume set) presents titles, originally published between 1950 and 1997, covering many of these traditions and theories. It includes contributions from many well-respected academics and is a fascinating insight into this diverse field.

Sex Differences serves as an advanced text for courses in evolutionary and human biology, psychology, and sexuality and gender studies. It also serves as a reference source for academic professionals in these disciplines. The book covers the evolution of sex and sex differences, and sex differences and sexual strategies in non-human and human animals. The final chapter addresses issues of sex and gender in interpersonal relationships, organizations and politics. Diagrams, graphs, charts, and tables illustrate key concepts; cartoons and photos provide visual breaks and an element of humor. Examines sexual differences from a multi-level comparative approach Contains a thorough coverage of literature through 1998 and into 1999 Illustrates pages with a generous use of cartoons, photos, figures, and diagrams Invites bonus learning with special interest boxes interspersed throughout text Presents a critical analysis Includes a combination of feminist and evolutionary thinking

Since its first appearance in Germany in 1911, Jews and Modern Capitalism has provoked vehement criticism. As Samuel Z. Klausner emphasizes, the lasting value of Sombart's work rests not in his results-most of which have long since been disproved-but in his point of departure. Openly acknowledging his debt to Max Weber, Sombart set out to prove the double thesis of the Jewish foundation of capitalism and the capitalist foundation of Judaism. Klausner, placing Sombart's work in its historical and societal context, examines the weaknesses and strengths of Jews and Modern Capitalism.

This book argues that there is no way to make progress in building a sustainable future without extensive participation of non-state actors. The volume explores the contribution of non-state actors to a sustainable transition, starting with citizens and communities of different kinds and ending with cities and city-networks. The authors analyse social, cultural, political and economic drivers and barriers for this transition, from individual behaviour to structural restraints, and investigate interplay between the two. Through a series of wide-ranging case studies from the UK, Australia, Germany, Italy and Denmark, and a number of comparative case studies, the volume provides an empirically and theoretically robust argument that highlights the need to develop, widen and scale up collective action and community-based engagement if the transition to sustainability is to be successful. This book will be of great interest to students and scholars of climate change, sustainability and environmental policy.
