Based on a foundation of science and empirical observation, engineering research and design has brought science fiction into science fact. The convergence of neuroscience and technology is facilitating the development of therapies that not long ago would have seemed unimaginable, if not impossible. With contributions from pioneers in industry, academia, and clinical medicine, Neuroengineering provides an understanding of the history, physiology and the most promising engineering technologies. The book presents clinical applications of neuromodulation and a detailed review of the science and mechanisms of action underlying deep brain stimulation. Contributions include discussions of seizure control, clinical, surgical, and technological aspects of responsive neurostimulation, and a thorough review of spinal cord stimulation for pain control. The book highlights promising technologies and applications for neural augmentation, brain and computer interfaces, and motor protheses. It concludes with coverage of the science underlying current neurostimulation techniques and new paradigm-shifting neuromodulation technologies. We are on the cusp of a technological revolution that promises to have more of an impact on human health, disease, and quality of life than any other in recent history. Its impact on medicine and society promises to be as dramatic as that of the development of antibiotics. The transition of neural engineering from basic research to intense commercialization and widespread clinical application

and acceptance is just around the corner. Providing in-depth coverage of cutting-edge developments in technology and clinical practice, the book presents detailed descriptions of technologies, science, and clinical results that build a foundation for the future.

This volume collects the research papers presented at the 6th International Conference on Sustainable Automotive Technologies (ICSAT), Gothenburg, 2014. The topical focus lies on latest advances in vehicle technology related to sustainable mobility. ICSAT is the core and state-of-the-art conference in the field of new technologies for transportation. Research contributions from the US, Australia, Europe and Asia illustrate the pivotal role of the conference. The book provides an excellent overview of R&D activities at OEMs as well as in leading universities and laboratories.

This resplendent volume is the most comprehensive study of Walker Evans's work ever published, containing masterful images accompanied by authoritative commentary from leading photography historians. The name Walker Evans conjures images of the American everyman. Whether it's his iconic contributions to James Agee's depressionera classic book, *Let Us Now Praise Famous Men*, his architectural explorations of antebellum plantations, or his subway series, taken with a camera hidden in his coat, Evans's accessible and eloquent photographs speak to us all. This comprehensive book traces the entire arc of Evans's remarkable career, from the 1930s to the 1970s. The illustrations in the book range from his earliest images taken with a vest pocket camera to his final photos using the then new SX-70 because his regular equipment had become too heavy to carry around. The book includes commentary from three of Evans's longtime friends, photographers John T. Hill and Jerry Thompson and professor emeritus (Yale University) Alan Trachtenberg. Their insight and first-hand experience give depth to their critical writings on Evans's work. In addition to offering a broad perspective on Evans's work, the book also clarifies the photographer's "anti-art" philosophy. Eschewing aesthetic hyperbole, Evans wanted his pictures to resonate with a wide audience. At the same time, his natural curiosity made him one of the most inventive photographers of all time. What these photographs and writings attest to is a huge and timeless talent, which came not from a camera, but from Evans's uniquely hungry eye.
